

Overview

IntelliTrack's **Stockroom** application keeps track of consumable inventory such as pens, toner cartridges, or any other item that will be "consumed". Consumable inventory is received and increases inventory levels and then issued to departments or persons, which reduces inventory levels.

Who uses IntelliTrack's Stockroom Solution?

IntelliTrack's **Stockroom** is very popular with companies that want a stand-alone receipt and issuance inventory tracking system. Supply depots, small warehouses, or any place that wants to track in "ins" and "outs" of items are ideal candidates for IntelliTrack's Stockroom solution. Existing Stockroom customers include chemical testing laboratories, large defense contractors, and many other kinds of stockrooms.

Features & Benefits of Stockroom

Feature	Benefit
Written in Access 2002/XP and includes source code for the workstation application	It is very flexible and completely open. Users can create custom reports, forms, and queries with Access 2002/XP.
All fields are user-definable	There is almost no limit as to how you can describe and track your items.
Handheld portable scanner support	It is now as simple as point and scan to issue, receive, and conduct an inventory. It is accurate and quick.
Portable time and date stamp	Know exactly when an item was issued, received, moved, inventoried, or added.
Wedge scanner support	Scan a department ID or persons badge and the items you want to issue or receive. It is that easy.
Items are tracked to a location	You will know exactly what you have and where it is located.
Maintains a complete history of an item's lifecycle	See who is using what. It gives you the information you need to make informed and sensible business decisions.
Serial number, lot tracking, and expiration dates	Very important in many applications such as electronics, pharmaceuticals, laboratories, and others.
Print barcodes	Print item, location, and custom barcode labels.
Import/Export	Imports or exports ASCII or text data for shared use with other software systems.
19 pre-loaded reports	Gives you meaningful information so you can make informed decisions.
Exception reporting	Find out what is missing. Helps you identify shrinkage and maintain an accurate inventory.
Reconciliation	Let's you pre-check all of the data prior to updating the main database. This ensures data integrity.
Security levels	Username and passwords let you restrict a user to view only access or five other levels of access.
Network Support	Let's you deploy the database on a server and access it remotely from your company's LAN.
Look-up tables	Helps you maintain consistent data and data integrity.
Online help	It is simple and straight forward to operate and understand. You will never be lost with online help.
Supports unlimited sites, locations, and items	You can manage an unlimited number of items in an unlimited number of sites and locations.
