

BadgePass in Universities

Access Manager - More campuses nationwide are implementing card access systems as a means to control entry and traffic flow to specific areas on campus. Whether you're looking to issue student's access to dorm rooms and computer labs or faculty access to offices and lounges, access control software allows for simplified electronic access to doors. Furthermore, lost and stolen ID cards can be automatically deactivated, minimizing the risk of compromised credentials.

Identity Manager - Issue student and faculty ID cards with ease using state of the art, enterprise ID software. Customize your badge designs with school logos and information, photos and other data. When considering ID software, ensure the system will seamlessly integrate with any third party application you may want to use your IDs for such as vending, cafeteria point of sale or tracking.

Time Manager - Keeping up with faculty time cards can be a challenge. With an electronic time management system, faculty and staff can use their ID cards to clock in and out every day, leaving a record of all arrivals and departures. This allows managers to log into the system and easily edit and approve time cards at the end of a pay period. Also great for student workers!

Visitor Manager - Eliminate paper log books for dormitory guest and prospective student registration. Simply scan a Driver's License for each visitor, choose a reason and location for their visit and print a customized visitor badge in seconds! Enjoy the benefits of electronic records, as you can easily search for current and previous visitor information through web-based reports.
