

# CLOUD BASED ID CARD MANAGEMENT

## CARDEXCHANGE® CONTROLLER CMS

### MANAGE CARD LIFE CYCLE

One of the important features of the Controller CMS solution is the management of the card life cycle. The card life cycle controls the various phases of the card from enrollment to end-of-use. Controller CMS allows you to manage this process easily. CardExchange® Controller CMS allows for the occasional mishaps like the card getting lost, broken or stolen which will require a new card to be produced. Controller CMS must be aware of the statuses to be able to restrict access on blocked cards. The users can request a change of status and a new card at any time via the online self-service portal.

### CARDHOLDER DATA

Our CardExchange® Controller CMS offers a variety of methods to import your card holder data. You can choose a CSV file import or synchronization through our customizable connectors. Our connectors offer real-time data link to your databases such as employee registration, human resources, access control or other back-office systems. Any information added to the card holder record such as a photo, card number, or biometric information will quickly update your connected back-office applications.

### CARD ISSUANCE

Once your card holder data is complete, the card is ready to be produced. After being printed and encoded successfully, it will report specific data back to the Controller CMS. Two important factors linked to the CMS are the number of cards produced and the chip serial number. This information will forever be safely secured inside Controller CMS. The status will change to 'ready to ship' as soon as the CMS receives all the information. Printing and encoding of your cards can either be done locally or through centralized production.

## FEATURES AT A GLANCE

✓ Centralised ID Management Solution

✓ SaaS Solution

✓ Lifecycle Tracking and Card Management

✓ Easy Data Import with Drag & Drop Feature

✓ Secure Login with User Profiles

✓ Powerful Reporting Tools

# CLOUD BASED ID CARD MANAGEMENT

## THE IDEAL SYSTEM

Controller CMS streamlines every step of the enrollment and life-cycle process. Use custom-configured workflows to establish a secure, consistent ID management program for card issuance, re-issuance, and renewals.

CardExchange® Controller CMS is a flexible solution for digital or physical card production using sophisticated business rules, user profile assignments, and life-cycle management.

### ID CARDS

Create, issue, block, blacklist or reprint directly from the Controller.

### ACCESS CONTROL

Communicate with existing access control system to monitor entry and exit points.

### PRINT ON DEMAND

Print cards locally or through a connected central production systems or "print farm."

### POINT OF SALE

Connect with your payment application to monitor, regulate and verify the prepaid amounts loaded into each card.

## ABOUT US

With applications from entry level, basic card production, to advanced technologies including contactless, biometrics and customization, CardExchange® Solutions, Inc. has your software solution.

Around the world, government, corporate, education, healthcare and business and industries of all levels and demands trust CardExchange®.
